

# Connecting Value, Risk, & ESG in Real Estate

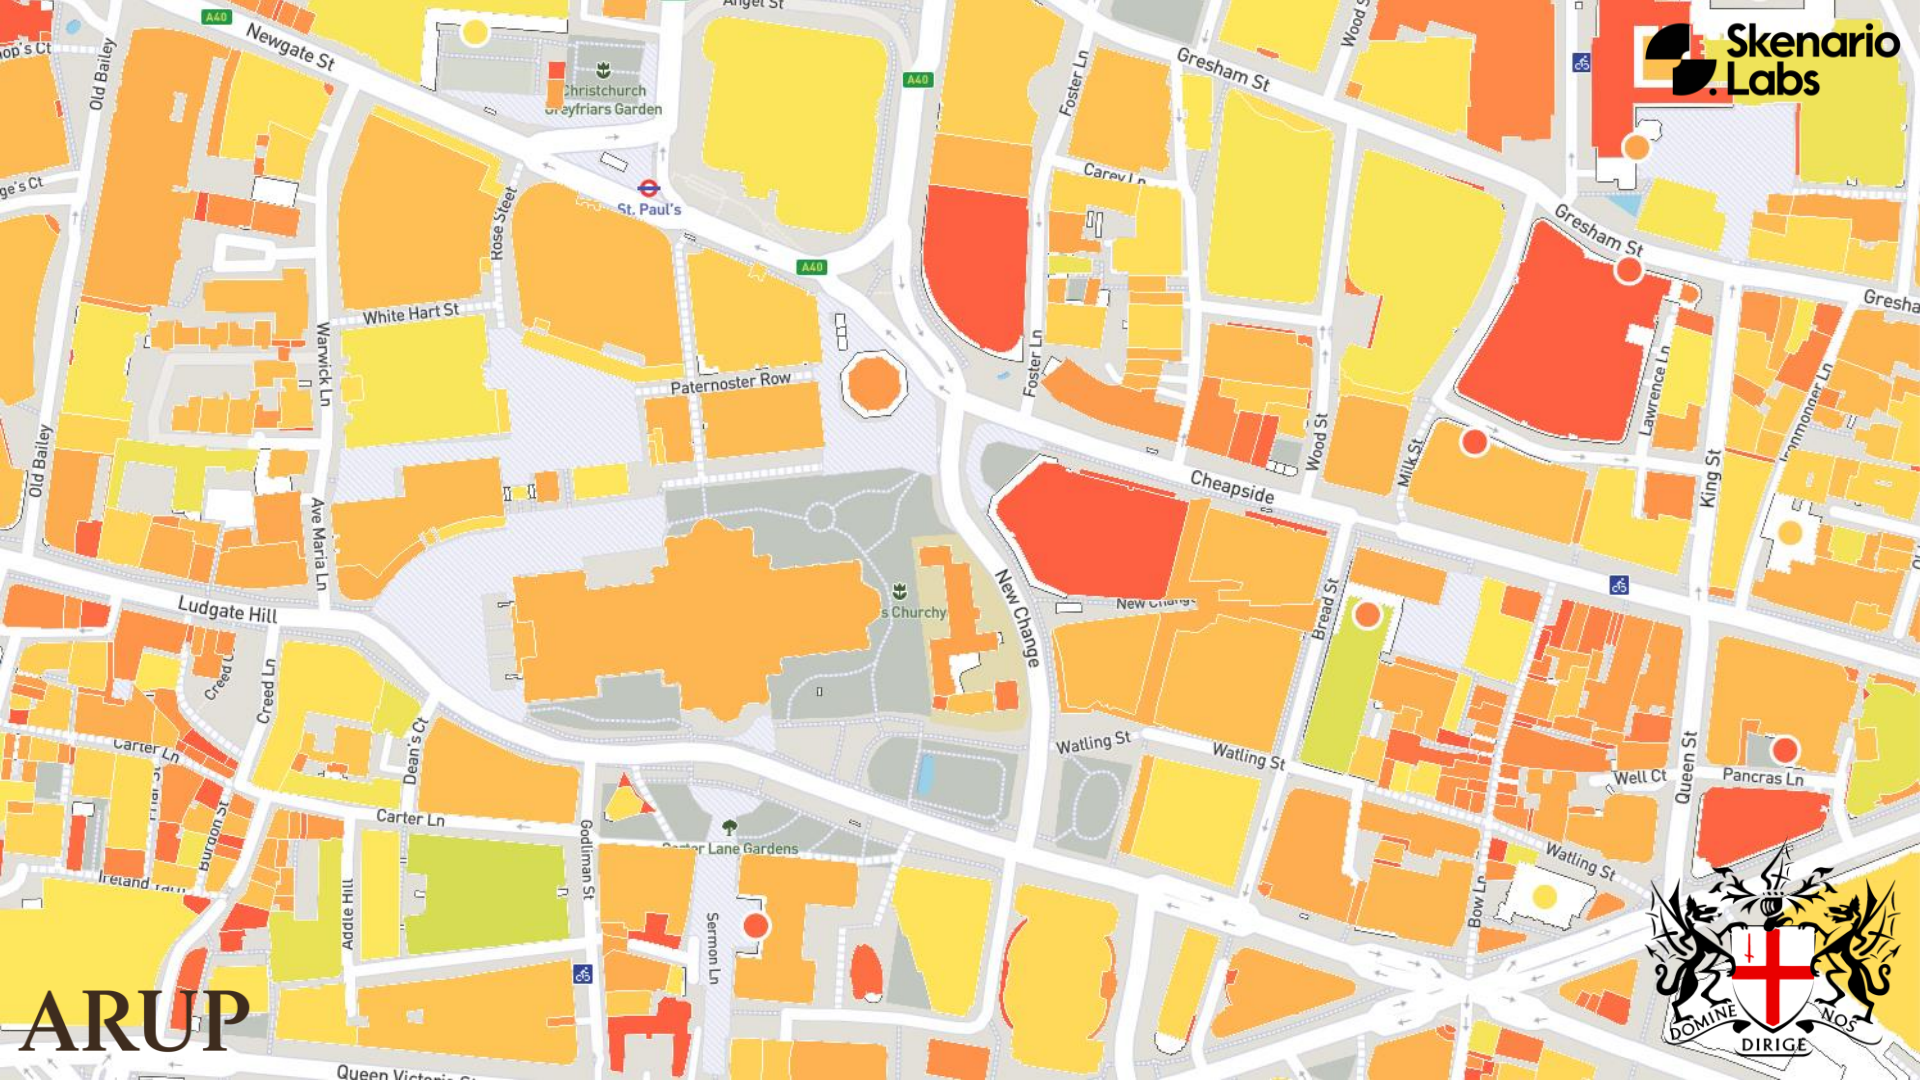

Zoë Henderson  
UK Building Lead

Buildings account for around  
**40%** of carbon emissions

**80%** of 2050's building stock  
already exists

In order to achieve climate targets, we must do more with  
the buildings we already have.

We cannot build our way out of trouble.

To find out more about how we can support sustainable real estate decision-making, visit us in the **Innovation Hub**.
