RESOP

Planning Optimisation

Scottish & Southern
Electricity Networks

WHO WE ARE: SSEN

Our electricity distribution networks carry electricity to over 3.8 million homes and businesses across the north of Scotland and central southern England.

Our skilled teams live and work in the communities they serve, supported by engineering and customer service teams in centres like Reading, Portsmouth, Perth and Inverness.

We provide a valued and trusted service for everyone in our communities: working 24-hours a day, 365 days a year, to ensure our networks are safe, reliable and responsive to customer needs.

Connected enough
renewable electricity
to power 3.8m homes

780,000+ vulnerable
households
on our Priority Services
Register

over **3,500** employees
across the country

130,000km of
overhead lines and
underground cables

106,000 substations

100+ subsea
cables powering
island communities

RESOP OVERVIEW

Problem being addressed

1. Local Authority plans are difficult to incorporate into Network Investment plans.
2. Data quality used to create LAEPS is an issue and can quickly become out-dated.
3. LAEPs and LHEES are expensive and time-consuming projects.

Objectives

1. Develop a standardised process for building digital LAEPs
2. How to add LAEPs to DFES
3. Develop digital tools to support self-serve functionality.
4. Collaborate with other vectors

RESOP Development Roadmap

- Visualise & query data sets
- API with Navi Power Flow tool
- Visualise constraints

RIIO-ED1

- Basic self-serve connections functionality
- Visualise Primary DFES
- Ongoing support for 7 Local Authorities

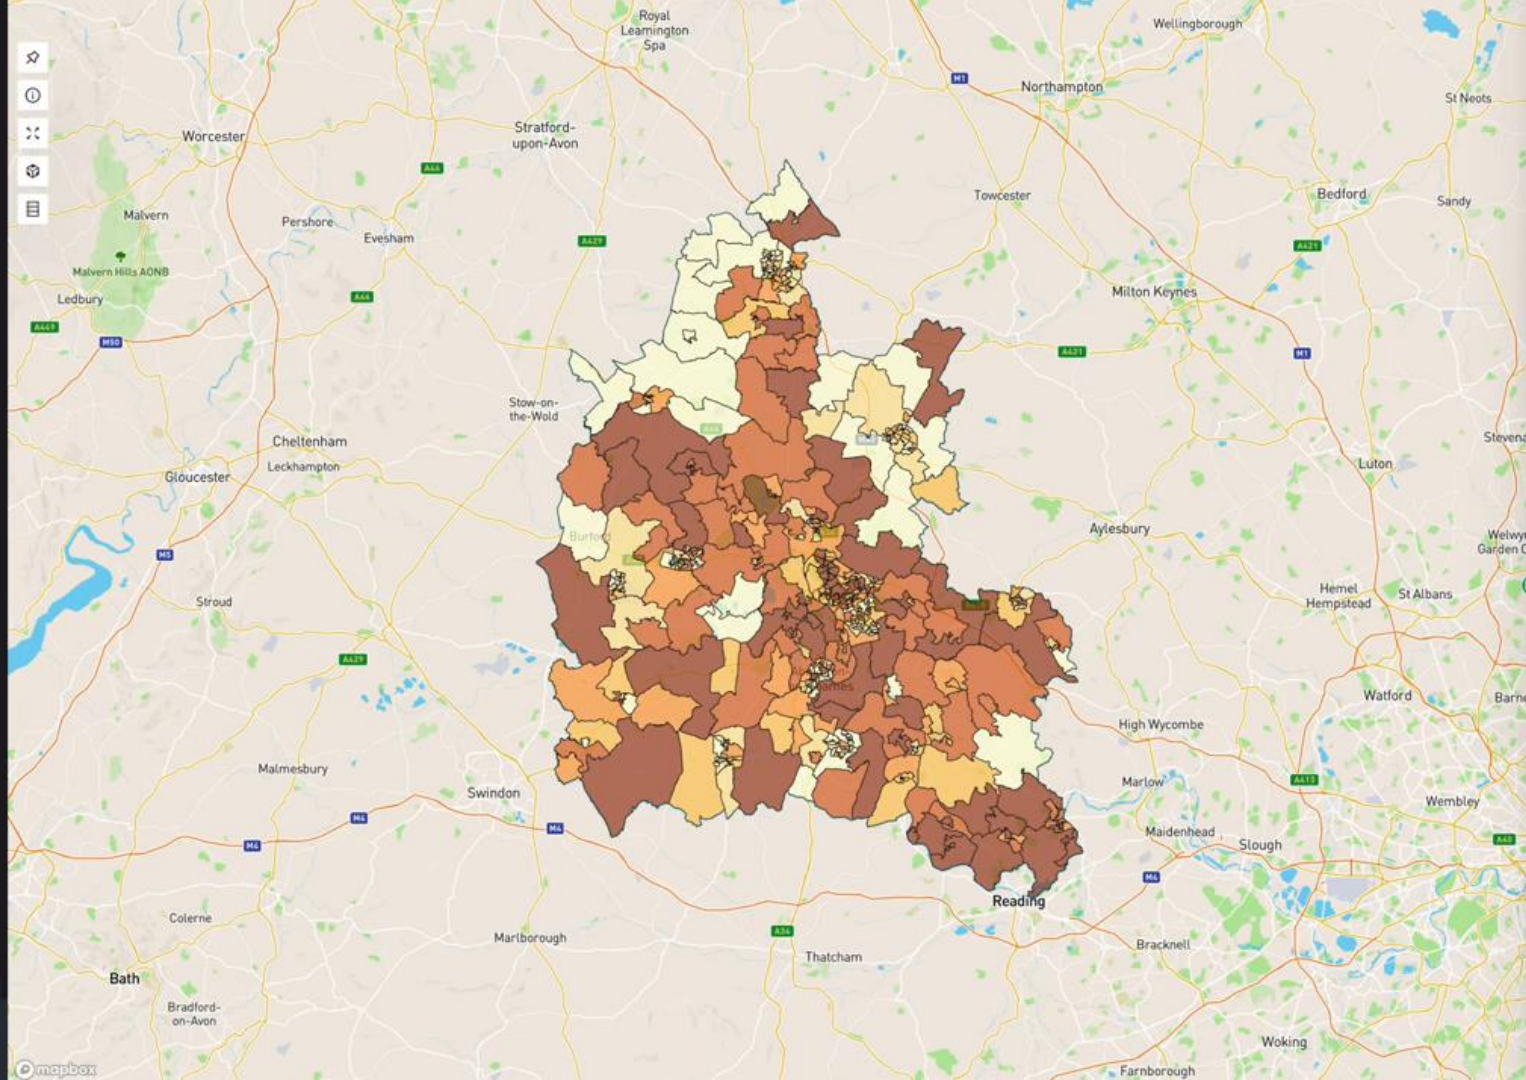

- Visualise LHEES & LAEP outputs from Arup
- Full self-serve functionality proof of concept
- Gas/Hydrogen/District Heating Use Case development & Visualisation

RIIO-ED2

- LHEES and LAEP outputs made accessible to SSEN for analysis
- Ongoing support for **All** Local Authorities
- New methodology for DFES data acquisition & linkage with LAEPs
- LAEP & LHEES Roadmap Wizard (beta)
- Synergies with UKPN and NGED

Use Case 1: Decarbonising Heat

Use Case 2: Digital LAEPs & LHEES

Scenarios is a tool that automatically schedules the rollout of selected technologies based on local renewable potential and your own input parameters, such as net-zero targets, budget, and local priorities. Get started by clicking 'Create a new scenario'.
