

EIP016 How do we eliminate emissions on the NTS?

Problem Statement Details

Emissions reduction techniques have been developed and are in deployment, however, we still emit CO₂ and leak natural gas. We need novel solutions to prevent all emissions from the gas network.

Alongside this we also need novel, low cost, easy-to-deploy solutions to find leaks on the network, and then work to prevent them (or if unavoidable, capture them to be put back into the network). This should cover emissions from our pipelines and above ground installations.

Key Stakeholders

Operations, Commercial

Target Market

Gas Transmission

Enablers and Constraints

Enablers; the prior projects outlined below:

Monitoring of real-time Fugitive Emissions (MORFE) https://smarter.energynetworks.org/projects/nia_nggt0137/

CH4RGE – Methane Reduction from Gas Equipment

https://smarter.energynetworks.org/projects/nia_nggt0164/

CH4RGE – Methane Reduction from Gas Equipment – Phase 2

https://smarter.energynetworks.org/projects/nia_nggt0174/

Scalability and Target Implementation Date

RIIO-3 onwards

Innovation Strategy Target Areas

Innovation Theme	Target Area	Primary or Secondary
Data and Digitalisation	The shift to data-driven, digitally-enabled networks is critical as we move towards Net Zero.	Not applicable
	We need your help to drive standardisation, interoperability, security and digital skills whilst accelerating our transformation to data-driven networks by the mid 2030s.	
Flexibility and Market Evolution	Energy networks must quickly and efficiently respond to the rapidly evolving needs of the energy system transition. We need your support to eliminate barriers to new market entrants, deploy novel commercial and network management solutions whilst ensuring fair participation and eliminating regulatory barriers within the RIIO-2 price control periods.	Not applicable
Net zero and the energy system transition	In order to meet the UK net zero targets of 2050 we must start converting our networks to deliver low carbon fuels today. We want to work with you to develop the role of our gas networks into the future by investigating, trialling, implementing and delivering safe, low carbon alternatives to natural gas such as Hydrogen.	Secondary
	Net Zero requires connection of more low and zero carbon sources of energy generation, storage and demand to both the transmission and distribution networks. We need your innovative methods for effective network management and accessing flexibility to improve visibility, forecasting and modelling of low carbon technologies.	
Optimised assets and practices	Innovation has a key role to play in ensuring our networks continue to remain reliable, safe, secure and resilient to our changing climate. We are constantly looking to improve and welcome support to identify methods to prevent interruptions, ensure resilience, reduce climate impact and future-proof our networks.	Primary
Supporting Consumers in Vulnerable Situations	Equality and fairness are the foundations of a just transition to Net Zero. We hope you can provide insight into the transient and situational nature of vulnerability and how we can overcome the impact the energy system has on consumers, building strong relationships for the future.	Not applicable
Whole Energy System Transition	The energy system must consider the full range of opportunities, risks and interdependencies that exist across the energy networks to integrate and optimise them in a way that best serves the consumer. We are looking for ways to improve visibility of the networks and transitional options, co-ordinate approaches and collaborate across the UK.	Not applicable
