

Notes on Completion: Please refer to the appropriate NIA Governance Document to assist in the completion of this form. The full completed submission should not exceed 6 pages in total.

## NIA Project Registration and PEA Document

### Date of Submission

May 2012

### Project Reference Number

CNT1002

## Project Registration

### Project Title

Hook Norton Low Carbon Community Smart Grid

### Project Reference Number

CNT1002

### Project Licensee(s)

National Grid Electricity Distribution

### Project Start

February 2012

### Project Duration

1 year and 9 months

### Nominated Project Contact(s)

WPD Future Networks Team (01332 827446)

### Project Budget

£344,000.00

## Summary

Hook Norton is a dynamic rural community in Oxfordshire with around 2,500 residents and 800 properties. Last year, the village was awarded £400k from DECC's Low Carbon Communities programme to help its residents 'decarbonise'. Thanks to the Hook Norton Low Carbon group and the limited company which they have set up, the money has been spent on a variety of different projects which, over time, will return money back into the community. Initiatives undertaken to date include home retrofits (£5 to £40k interest free loans), a school makeover (including a 17.5kW PV installation) and a small automatic metering deployment.

Plans are now underway to obtain planning consent and funding for a community wind turbine (330kW) to the North East of the village. Hook Norton, like many rural villages represents a unique challenge when it comes to carbon reduction because success can only be achieved via a high level of engagement with the local community. Given the fantastic work that has already gone on in Hook Norton, Central Networks aims to develop a range of tools and techniques that can be used to support the low carbon transition within rural communities.

## Problem Being Solved

### Method(s)

### Scope

### Objective(s)

This project aims:

- To develop and explore customer engagement and incentive programmes. This aspect will include a small scale domestic demand response trial
- To develop community data measurement and display capabilities (e.g. to ascertain the total electricity consumption of the village by installing measurement devices at various locations. Subsequently, to provide this and other relevant information back to the local community via a web portal/customer interface (which if successful, could then be used for other villages)

- To deploy Power Line Communications (PLC) technology at scale within the Low Voltage (LV) network, illustrating its potential capabilities for enabling smart grid end point measurement and data aggregation
- To test and compare a variety of 'off the shelf' asset monitoring solutions for HV/LV pole-mounted and ground-mounted substations. The quality of the products will be assessed, alongside the installation methods
- To test and demonstrate a miniature smart grid telecommunications network (with multiple technologies) that will enable both local and remote network visibility
- To explore the changes that could be made to a network control system for enabling simple forms of LV network monitoring and management.

### **Consumer Vulnerability Impact Assessment (RIIO-2 Projects Only)**

## Project Eligibility Assessment Part 1

There are slightly differing requirements for RIIO-1 and RIIO-2 NIA projects. This is noted in each case, with the requirement numbers listed for both where they differ (shown as RIIO-2 / RIIO-1).

### Requirement 1

Facilitate the energy system transition and/or benefit consumers in vulnerable situations (Please complete sections 3.1.1 and 3.1.2 for RIIO-2 projects only)

Please answer **at least one** of the following:

#### How the Project has the potential to facilitate the energy system transition:

n/a

#### How the Project has potential to benefit consumer in vulnerable situations:

n/a

### Requirement 2 / 2b

Has the potential to deliver net benefits to consumers

Project must have the potential to deliver a Solution that delivers a net benefit to consumers of the Gas Transporter and/or Electricity Transmission or Electricity Distribution licensee, as the context requires. This could include delivering a Solution at a lower cost than the most efficient Method currently in use on the GB Gas Transportation System, the Gas Transporter's and/or Electricity Transmission or Electricity Distribution licensee's network, or wider benefits, such as social or environmental.

#### Please provide an estimate of the saving if the Problem is solved (RIIO-1 projects only)

n/a

#### Please provide a calculation of the expected benefits the Solution

n/a

#### Please provide an estimate of how replicable the Method is across GB

n/a

#### Please provide an outline of the costs of rolling out the Method across GB.

n/a

### Requirement 3 / 1

Involve Research, Development or Demonstration

A RIIO-1 NIA Project must have the potential to have a Direct Impact on a Network Licensee's network or the operations of the System Operator and involve the Research, Development, or Demonstration of at least one of the following (please tick which applies):

- A specific piece of new (i.e. unproven in GB, or where a method has been trialled outside GB the Network Licensee must justify repeating it as part of a project) equipment (including control and communications system software).
- A specific novel arrangement or application of existing licensee equipment (including control and/or communications systems and/or software)
- A specific novel operational practice directly related to the operation of the Network Licensees system
- A specific novel commercial arrangement

RIIO-2 Projects

- A specific piece of new equipment (including monitoring, control and communications systems and software)
- A specific piece of new technology (including analysis and modelling systems or software), in relation to which the Method is

unproven

- A new methodology (including the identification of specific new procedures or techniques used to identify, select, process, and analyse information)
- A specific novel arrangement or application of existing gas transportation, electricity transmission or electricity distribution equipment, technology or methodology
- A specific novel operational practice directly related to the operation of the GB Gas Transportation System, electricity transmission or electricity distribution
- A specific novel commercial arrangement

## Specific Requirements 4 / 2a

**Please explain how the learning that will be generated could be used by the relevant Network Licensees**

n/a

**Or, please describe what specific challenge identified in the Network Licensee's innovation strategy that is being addressed by the project (RIIO-1 only)**

n/a

- Has the Potential to Develop Learning That Can be Applied by all Relevant Network Licensees

**Is the default IPR position being applied?**

- Yes

**Please demonstrate how the learning from the project can be successfully disseminated to Network Licensees and other interested parties.**

**Please describe how many potential constraints or costs caused, or resulting from the imposed IPR arrangements.<**

**Please justify why the proposed IPR arrangements provide value for money for customers.**

## Project Eligibility Assessment Part 2

**Not lead to unnecessary duplication**

A Project must not lead to unnecessary duplication of any other Project, including but not limited to IFI, LCNF, NIA, NIC or SIF projects already registered, being carried out or completed.

**Please demonstrate below that no unnecessary duplication will occur as a result of the Project.**

n/a

**If applicable, justify why you are undertaking a Project similar to those being carried out by any other Network Licensees.**

n/a

## Additional Governance And Document Upload

**Please identify why the project is innovative and has not been tried before**

n/a

**Relevant Foreground IPR**

n/a

**Data Access Details**

n/a

**Please identify why the Network Licensees will not fund the project as apart of it's business and usual activities**

n/a

**Please identify why the project can only be undertaken with the support of the NIA, including reference to the specific risks(e.g. commercial, technical, operational or regulatory) associated with the project**

n/a

**This project has been approved by a senior member of staff**

Yes
