

Notes on Completion: Please refer to the appropriate NIA Governance Document to assist in the completion of this form. The full completed submission should not exceed 6 pages in total.

NIA Project Registration and PEA Document

Date of Submission

Oct 2014

Project Reference Number

NIA_NGGD0042

Project Registration

Project Title

PRISM (Pipe replacement in situ manufacturing) – Strategy and High Level Plan for Delivery.

Project Reference Number

NIA_NGGD0042

Project Licensee(s)

Cadent

Project Start

October 2014

Project Duration

0 years and 4 months

Nominated Project Contact(s)

NGG Project Manager – John Connor

Project Budget

£13,300.00

Summary

This project will review PRISM related developments made by the individual project partners and to produce a report entitled 'PRISM – Strategy and High Level Plan for Delivery.'

Nominated Contact Email Address(es)

Innovation@cadentgas.com

Problem Being Solved

Current methods of replacing gas distribution mains are costly and disruptive to customers and road users. This PRISM initiative seeks to determine a method of achieving the outputs of mains and service replacement and/or refurbishment with increased customer satisfaction whilst being quicker and cheaper than current methods.

The renewal of mains and services within a street could be possible via one excavation at each end of the street; this would result in reduced cost and effort, improved safety, environmental benefits through reduced waste to landfill and reduced customer and third party disruption, leading to improved customer satisfaction.

Method(s)

This project will build on recent work outside of the NIA and has brought together suitable project partners who have delivered a proof of concept method of applying a polymer to the inside of pipes with the potential to satisfy gas industry requirements. Other similar projects have been undertaken over the past 10 years, the most successful being project FORGE; a scheme managed by both National Grid and Balfour Beatty. FORGE developed a process to rehabilitate gas mains through lining technology adopted by the water sectors. In 2011 a related project for lining gas mains, 3-6" was undertaken in the Leeds area.

This project is to review those achievements the more recent proof of concept to identify a strategic and practical approach to delivering a working solution.

Scope

This project will review PRISM related developments made by the individual project partners and to produce a report entitled 'PRISM – Strategy and High Level Plan for Delivery.'

Objective(s)

To deliver a high level scope and plan for delivery of the PRISM (Pipe replacement in situ manufacturing) technique to expedite commissioning of projects correctly targeted at accelerating the delivery of a commercial solution

Consumer Vulnerability Impact Assessment (RIIO-2 Projects Only)

n/a

Success Criteria

Compelling case to continue to next stage.

Project Partners and External Funding

n/a

Potential for New Learning

n/a

Scale of Project

Single report expected for delivery within 3 months. No site work.

Technology Readiness at Start

TRL3 Proof of Concept

Technology Readiness at End

TRL3 Proof of Concept

Geographical Area

NGG Offices, Hinckley, Leicestershire. 3M site in Bracknell.

Revenue Allowed for the RIIO Settlement

Tier 1 mains replacement/risk removal under Efficient and Safe Work Delivery and Removal of Risk.

Total Repex in allowance = £3.2bn.

Allowances as per Ofgem RIIO-GD1 Final Proposals and all figures are in 2009/10 prices.

Indicative Total NIA Project Expenditure

£13,300 Total NIA Project Expenditure

Project Eligibility Assessment Part 1

There are slightly differing requirements for RIIO-1 and RIIO-2 NIA projects. This is noted in each case, with the requirement numbers listed for both where they differ (shown as RIIO-2 / RIIO-1).

Requirement 1

Facilitate the energy system transition and/or benefit consumers in vulnerable situations (Please complete sections 3.1.1 and 3.1.2 for RIIO-2 projects only)

Please answer **at least one** of the following:

How the Project has the potential to facilitate the energy system transition:

n/a

How the Project has potential to benefit consumer in vulnerable situations:

n/a

Requirement 2 / 2b

Has the potential to deliver net benefits to consumers

Project must have the potential to deliver a Solution that delivers a net benefit to consumers of the Gas Transporter and/or Electricity Transmission or Electricity Distribution licensee, as the context requires. This could include delivering a Solution at a lower cost than the most efficient Method currently in use on the GB Gas Transportation System, the Gas Transporter's and/or Electricity Transmission or Electricity Distribution licensee's network, or wider benefits, such as social or environmental.

Please provide an estimate of the saving if the Problem is solved (RIIO-1 projects only)

A full analysis will be possible when the report has highlighted the delivery options

Please provide a calculation of the expected benefits the Solution

Not applicable – research only

Please provide an estimate of how replicable the Method is across GB

This Method could be applied across GB and beyond, the scale of which will vary upon Network Licensee.

Please provide an outline of the costs of rolling out the Method across GB.

Rollout costs will consist of equipment purchase or hire, training costs and the cost of any required changes to relevant national or local policy for this work type. All costs will vary with the level of take up both locally within each GDN and from a national perspective. It is expected that these costs will be significantly outweighed by the benefits but a figure is difficult to propose at this stage due the variables highlighted.

Requirement 3 / 1

Involve Research, Development or Demonstration

A RIIO-1 NIA Project must have the potential to have a Direct Impact on a Network Licensee's network or the operations of the System Operator and involve the Research, Development, or Demonstration of at least one of the following (please tick which applies):

- A specific piece of new (i.e. unproven in GB, or where a method has been trialled outside GB the Network Licensee must justify repeating it as part of a project) equipment (including control and communications system software).
- A specific novel arrangement or application of existing licensee equipment (including control and/or communications systems and/or software)
- A specific novel operational practice directly related to the operation of the Network Licensees system
- A specific novel commercial arrangement

RIIO-2 Projects

- A specific piece of new equipment (including monitoring, control and communications systems and software)
- A specific piece of new technology (including analysis and modelling systems or software), in relation to which the Method is unproven
- A new methodology (including the identification of specific new procedures or techniques used to identify, select, process, and analyse information)
- A specific novel arrangement or application of existing gas transportation, electricity transmission or electricity distribution equipment, technology or methodology
- A specific novel operational practice directly related to the operation of the GB Gas Transportation System, electricity transmission or electricity distribution
- A specific novel commercial arrangement

Specific Requirements 4 / 2a

Please explain how the learning that will be generated could be used by the relevant Network Licensees

Learning generated will be in the form of an output report.

Or, please describe what specific challenge identified in the Network Licensee's innovation strategy that is being addressed by the project (RIIO-1 only)

Not applicable.

- Has the Potential to Develop Learning That Can be Applied by all Relevant Network Licensees

Is the default IPR position being applied?

- Yes

Project Eligibility Assessment Part 2

Not lead to unnecessary duplication

A Project must not lead to unnecessary duplication of any other Project, including but not limited to IFI, LCNF, NIA, NIC or SIF projects already registered, being carried out or completed.

Please demonstrate below that no unnecessary duplication will occur as a result of the Project.

n/a

If applicable, justify why you are undertaking a Project similar to those being carried out by any other Network Licensees.

n/a

Additional Governance And Document Upload

Please identify why the project is innovative and has not been tried before

n/a

Relevant Foreground IPR

n/a

Data Access Details

n/a

Please identify why the Network Licensees will not fund the project as apart of it's business and usual activities

n/a

Please identify why the project can only be undertaken with the support of the NIA, including reference to

the specific risks(e.g. commercial, technical, operational or regulatory) associated with the project

n/a

This project has been approved by a senior member of staff

Yes
