

## NIA Project Registration and PEA Document

### Date of Submission

Mar 2015

### Project Reference

NIA\_NGGD0054

## Project Registration

### Project Title

PRISM (Pipe Replacement in situ Manufacturing) – 6" Line Trial

### Project Reference

NIA\_NGGD0054

### Project Licensee(s)

National Grid Gas Distribution

### Project Start

March 2015

### Project Duration

0 years and 11 months

### Nominated Project Contact(s)

NGGD Project Manager – John Connor

### Project Budget

£979,472.00

## Summary

To carry out a trial on a 6" inch abandoned main including identified tests to prove the concept of PRISM (Pipe replacement in situ manufacturing) technique. Write a closure report including policy test results and lessons learnt and next steps to feed into the whole project objective plan.

### Nominated Contact Email Address(es)

Box.GT.Innovation@nationalgrid.com

## Problem Being Solved

Current methods of replacing gas distribution mains are costly and disruptive to customers and road users. This PRISM initiative seeks to determine a method of achieving the outputs of mains replacement or Re-habilitation with increased customer satisfaction and whilst being quicker and cheaper than current methods.

The renewal of mains within a street could be possible via one excavation at each end of the street; this would result in reduced cost and effort, improved safety, environmental benefits through reduced waste to landfill and reduced customer and third party disruption, leading to improved customer satisfaction.

## Method(s)

This project will build on recent work outside of the NIA and has brought together suitable project partners and delivered proof of concept method of applying a polymer to inside of pipes with potential to satisfy gas industry requirement. Other projects have been undertaken over the past 10 years. The most successful of being project FORGE; a scheme managed by both National Grid and Balfour Beatty. FORGE developed a process to rehabilitate gas mains through a replacement/re-habilitation technology adopted by the water sectors. In 2011 a project for gas mains, 3-6" was undertaken in the Leeds area. This project is to review those achievements and identify a strategic and practical approach to delivering a working solution.

## Scope

To carry out a trial on a 6" inch abandoned main including identified tests to prove the concept of PRISM (Pipe replacement in situ manufacturing) technique. Write a closure report including policy test results and lessons learnt and next steps to feed into the whole project objective plan.

## Objective(s)

To support the development and delivery of a safe and efficient suite of processes, tools and techniques to replace gas mains that significantly reduces the need for the excavation and reinstatement element of existing processes and thereby significantly reduce the costs and customer and stakeholder inconvenience and disruption.

This 6" trial will provide a proof of concept for future trials on PRISM (Pipe replacement in situ manufacturing) technique to expedite commissioning of projects correctly targeted at accelerating the delivery of a commercial solution

## Consumer Vulnerability Impact Assessment (RIIO-2 Projects Only)

n/a

## Success Criteria

Satisfactory evidence to support the PRISM technique and results that enable us to continue to the 12" trial.

## Project Partners and External Funding

n/a

## Potential for New Learning

n/a

## Scale of Project

This project is a trial of PRISM on a 6" main, an output report will be written which will influence further stages of the project and can be shared with the other GDNs.

## Technology Readiness at Start

TRL3 Proof of Concept

## Technology Readiness at End

TRL4 Bench Scale Research

## Geographical Area

Trial site in Stoke on Trent.

## Revenue Allowed for the RIIO Settlement

Tier 1 mains replacement/risk removal under Efficient and Safe Work Delivery and Removal of Risk.

Total Repex in allowance = £3.2bn.

Allowances as per Ofgem RIIO-GD1 Final Proposals and all figures are in 2009/10 prices.

## Indicative Total NIA Project Expenditure

£667,822 total external spend, split across all parties.

Total National Grid NIA Spend (including Internals and contingency) £979,472

## Project Eligibility Assessment Part 1

There are slightly differing requirements for RIIO-1 and RIIO-2 NIA projects. This is noted in each case, with the requirement numbers listed for both where they differ (shown as RIIO-2 / RIIO-1).

### Requirement 1

Facilitate the energy system transition and/or benefit consumers in vulnerable situations (Please complete sections 3.1.1 and 3.1.2 for RIIO-2 projects only)

Please answer **at least one** of the following:

#### How the Project has the potential to facilitate the energy system transition:

n/a

#### How the Project has potential to benefit consumer in vulnerable situations:

n/a

### Requirement 2 / 2b

Has the potential to deliver net benefits to consumers

Project must have the potential to deliver a Solution that delivers a net benefit to consumers of the Gas Transporter and/or Electricity Transmission or Electricity Distribution licensee, as the context requires. This could include delivering a Solution at a lower cost than the most efficient Method currently in use on the GB Gas Transportation System, the Gas Transporter's and/or Electricity Transmission or Electricity Distribution licensee's network, or wider benefits, such as social or environmental.

#### Please provide an estimate of the saving if the Problem is solved (RIIO-1 projects only)

A full analysis will be possible when the report has highlighted the delivery options

#### Please provide a calculation of the expected benefits the Solution

Not applicable – research only

#### Please provide an estimate of how replicable the Method is across GB

This Method could be applied across GB and beyond, the scale of which will vary upon Network Licensee.

#### Please provide an outline of the costs of rolling out the Method across GB.

Rollout costs will consist of equipment purchase or hire, training costs and the cost of any required changes to relevant national or local policy for this work type. All costs will vary with the level of take up both locally within each GDN and from a national perspective. It is expected that these costs will be significantly outweighed by the benefits but a figure is difficult to propose at this stage due the variables highlighted.

### Requirement 3 / 1

Involve Research, Development or Demonstration

A RIIO-1 NIA Project must have the potential to have a Direct Impact on a Network Licensee's network or the operations of the System Operator and involve the Research, Development, or Demonstration of at least one of the following (please tick which applies):

- A specific piece of new (i.e. unproven in GB, or where a method has been trialled outside GB the Network Licensee must justify repeating it as part of a project) equipment (including control and communications system software).
- A specific novel arrangement or application of existing licensee equipment (including control and/or communications systems and/or software)
- A specific novel operational practice directly related to the operation of the Network Licensees system
- A specific novel commercial arrangement

RIIO-2 Projects

- A specific piece of new equipment (including monitoring, control and communications systems and software)
- A specific piece of new technology (including analysis and modelling systems or software), in relation to which the Method is unproven
- A new methodology (including the identification of specific new procedures or techniques used to identify, select, process, and analyse information)
- A specific novel arrangement or application of existing gas transportation, electricity transmission or electricity distribution equipment, technology or methodology
- A specific novel operational practice directly related to the operation of the GB Gas Transportation System, electricity transmission or electricity distribution
- A specific novel commercial arrangement

## Specific Requirements 4 / 2a

**Please explain how the learning that will be generated could be used by the relevant Network Licensees**

n/a

**Or, please describe what specific challenge identified in the Network Licensee's innovation strategy that is being addressed by the project (RIIO-1 only)**

n/a

- Has the Potential to Develop Learning That Can be Applied by all Relevant Network Licensees

**Is the default IPR position being applied?**

- Yes

## Project Eligibility Assessment Part 2

### Not lead to unnecessary duplication

A Project must not lead to unnecessary duplication of any other Project, including but not limited to IFI, LCNF, NIA, NIC or SIF projects already registered, being carried out or completed.

**Please demonstrate below that no unnecessary duplication will occur as a result of the Project.**

n/a

**If applicable, justify why you are undertaking a Project similar to those being carried out by any other Network Licensees.**

n/a

## Additional Governance And Document Upload

**Please identify why the project is innovative and has not been tried before**

n/a

### Relevant Foreground IPR

n/a

### Data Access Details

n/a

**Please identify why the Network Licensees will not fund the project as apart of it's business and usual activities**

n/a

**Please identify why the project can only be undertaken with the support of the NIA, including reference to**

**the specific risks(e.g. commercial, technical, operational or regulatory) associated with the project**

n/a

**This project has been approved by a senior member of staff**

Yes
