

NIA Project Registration and PEA Document

Date of Submission

Apr 2013

Project Reference Number

Project Registration

Project Title

Design and Development of Maintenance Delivery Tools (MDT)

Project Reference Number

Project Licensee(s)

National Grid Electricity Transmission

Project Start

September 2010

Project Duration

3 years and 7 months

Nominated Project Contact(s)

National Grid TO Innovation Team

Project Budget

£299,000.00

Summary

This programme of work includes the following projects:

- Severn Cable Tunnel Access/Egress Trolley
- Earthwire Platform
- Reduction of Stress/Strain to OHL Staff due to Multiple Operations
- Earthwire Lifting Beam
- Development of Yoke Plates A, V, O and L.
- Power Ladder Access Basket

Nominated Contact Email Address(es)

Problem Being Solved

Method(s)

Scope

Objective(s)

All projects aim to deliver improvements in both current maintenance techniques used to complete routine maintenance activities and the Health and Safety of the personnel completing the activities via:

- A powered access/egress trolley for transporting tools/equipment along the access route for the Severn Cable Tunnel. The requirement for rescue will also be accommodated by the inclusion of a stretcher system onto the equipment.
- A lightweight platform which will give access for one linesperson to the earthwire span. The platform must be quick and easy to install on all tower types and will extend approximately 2.5m out from the tower into the span.
- Trolley Jump Kit (CARLA) – develop a lightweight arrangement that will aid the jumping through suspension insulator sets and quad conductor spacers.
- A lightweight lifting beam for installation on suspension tower peaks for the replacement of earthwire fittings.
- A set of lightweight maintenance yokes for replacement of tension insulators on the Overhead Line assets.
- A lightweight powered ladder access system for access/egress to and working on suspension insulator strings. The system will utilise the current standard overhead line ladders and will also incorporate a battery powered rope climbing device. The system will enable the overhead lines persons to obtain the best working position whilst completing routine maintenance activities. The system will give the lines persons a working platform which can be powered up and down the ladder.

Consumer Vulnerability Impact Assessment (RIIO-2 Projects Only)

Project Eligibility Assessment Part 1

There are slightly differing requirements for RII0-1 and RII0-2 NIA projects. This is noted in each case, with the requirement numbers listed for both where they differ (shown as RII0-2 / RII0-1).

Requirement 1

Facilitate the energy system transition and/or benefit consumers in vulnerable situations (Please complete sections 3.1.1 and 3.1.2 for RII0-2 projects only)

Please answer **at least one** of the following:

How the Project has the potential to facilitate the energy system transition:

n/a

How the Project has potential to benefit consumer in vulnerable situations:

n/a

Requirement 2 / 2b

Has the potential to deliver net benefits to consumers

Project must have the potential to deliver a Solution that delivers a net benefit to consumers of the Gas Transporter and/or Electricity Transmission or Electricity Distribution licensee, as the context requires. This could include delivering a Solution at a lower cost than the most efficient Method currently in use on the GB Gas Transportation System, the Gas Transporter's and/or Electricity Transmission or Electricity Distribution licensee's network, or wider benefits, such as social or environmental.

Please provide an estimate of the saving if the Problem is solved (RII0-1 projects only)

n/a

Please provide a calculation of the expected benefits the Solution

n/a

Please provide an estimate of how replicable the Method is across GB

n/a

Please provide an outline of the costs of rolling out the Method across GB.

n/a

Requirement 3 / 1

Involve Research, Development or Demonstration

A RII0-1 NIA Project must have the potential to have a Direct Impact on a Network Licensee's network or the operations of the System Operator and involve the Research, Development, or Demonstration of at least one of the following (please tick which applies):

- ☐ A specific piece of new (i.e. unproven in GB, or where a method has been trialled outside GB the Network Licensee must justify repeating it as part of a project) equipment (including control and communications system software).
- ☐ A specific novel arrangement or application of existing licensee equipment (including control and/or communications systems and/or software)
- ☐ A specific novel operational practice directly related to the operation of the Network Licensees system
- ☐ A specific novel commercial arrangement

RII0-2 Projects

- ☐ A specific piece of new equipment (including monitoring, control and communications systems and software)
- ☐ A specific piece of new technology (including analysis and modelling systems or software), in relation to which the Method is

unproven

- ☐ A new methodology (including the identification of specific new procedures or techniques used to identify, select, process, and analyse information)
- ☐ A specific novel arrangement or application of existing gas transportation, electricity transmission or electricity distribution equipment, technology or methodology
- ☐ A specific novel operational practice directly related to the operation of the GB Gas Transportation System, electricity transmission or electricity distribution
- ☐ A specific novel commercial arrangement

Specific Requirements 4 / 2a

Please explain how the learning that will be generated could be used by the relevant Network Licensees

n/a

Or, please describe what specific challenge identified in the Network Licensee's innovation strategy that is being addressed by the project (RIIO-1 only)

n/a

- ☐ Has the Potential to Develop Learning That Can be Applied by all Relevant Network Licensees

Is the default IPR position being applied?

- ☐ Yes

Please demonstrate how the learning from the project can be successfully disseminated to Network Licensees and other interested parties.

Please describe how many potential constraints or costs caused, or resulting from the imposed IPR arrangements.<

Please justify why the proposed IPR arrangements provide value for money for customers.

Project Eligibility Assessment Part 2

Not lead to unnecessary duplication

A Project must not lead to unnecessary duplication of any other Project, including but not limited to IFI, LCNF, NIA, NIC or SIF projects already registered, being carried out or completed.

Please demonstrate below that no unnecessary duplication will occur as a result of the Project.

n/a

If applicable, justify why you are undertaking a Project similar to those being carried out by any other Network Licensees.

n/a

Additional Governance And Document Upload

Please identify why the project is innovative and has not been tried before

n/a

Relevant Foreground IPR

n/a

Data Access Details

n/a

Please identify why the Network Licensees will not fund the project as apart of it's business and usual activities

n/a

Please identify why the project can only be undertaken with the support of the NIA, including reference to the specific risks(e.g. commercial, technical, operational or regulatory) associated with the project

n/a

This project has been approved by a senior member of staff

☒ Yes
