

Notes on Completion: Please refer to the appropriate NIA Governance Document to assist in the completion of this form. The full completed submission should not exceed 6 pages in total.

NIA Project Registration and PEA Document

Date of Submission

May 2012

Project Reference Number

Project Registration

Project Title

Northern Isles New Energy Solutions (NINES)

Project Reference Number

Project Licensee(s)

Scottish and Southern Electricity Networks Distribution

Project Start

November 2011

Project Duration

2 years and 2 months

Nominated Project Contact(s)

SSEN Future Networks Team

Project Budget

£34,950,000.00

Summary

Shetland is not connected to the main electricity network in GB. This means that the islands rely entirely on local sources of generation, and the supply and demand on the islands must be balanced locally. At any given time there cannot be more generation than demand, or vice versa, meaning that a significant percentage of the generation must have a reliable and controllable output.

At present, there is significant interest from wind generators to exploit the excellent wind resource on the islands. However, it is not possible to offer any new connections to these renewable generators as there is insufficient demand to utilise this type of generation. The NINES project is a three year project in which Scottish Hydro Electric Power Distribution will test a number of initiatives aimed, in particular, at reducing the maximum electrical demand on the islands, increasing the amount of wind generation able to connect, and therefore reducing the amount of electricity generated by fossil fuels. This should enable the existing Lerwick Power Station (LPS) to be replaced with a smaller and cheaper unit, whilst harnessing the local renewable energy potential and fostering energy efficiency.

Peak demand on the island is currently 48MW. The total capacity of LPS is 67MW providing a margin over maximum demand sufficient to ensure a secure supply taking account of planned and unplanned outages. Scottish Hydro Electric Power Distribution predicts that the NINES trials could deliver solutions that would reduce the capacity required from LPSs replacement by up to 20MW.

Problem Being Solved

Method(s)

Scope

Objective(s)

Specifically, in the NINES proposal, Scottish Hydro Electric Power Distribution seek to:

- Understand how best to accommodate Shetland's significant wind and marine potential on a small distribution network and ensure that the islands benefit from it
- Increase understanding of how the existing and known future demand on the island can be best managed, and peak demand reduced, on a constrained, isolated system.

Consumer Vulnerability Impact Assessment (RIIO-2 Projects Only)

Project Eligibility Assessment Part 1

There are slightly differing requirements for RIIO-1 and RIIO-2 NIA projects. This is noted in each case, with the requirement numbers listed for both where they differ (shown as RIIO-2 / RIIO-1).

Requirement 1

Facilitate the energy system transition and/or benefit consumers in vulnerable situations (Please complete sections 3.1.1 and 3.1.2 for RIIO-2 projects only)

Please answer **at least one** of the following:

How the Project has the potential to facilitate the energy system transition:

n/a

How the Project has potential to benefit consumer in vulnerable situations:

n/a

Requirement 2 / 2b

Has the potential to deliver net benefits to consumers

Project must have the potential to deliver a Solution that delivers a net benefit to consumers of the Gas Transporter and/or Electricity Transmission or Electricity Distribution licensee, as the context requires. This could include delivering a Solution at a lower cost than the most efficient Method currently in use on the GB Gas Transportation System, the Gas Transporter's and/or Electricity Transmission or Electricity Distribution licensee's network, or wider benefits, such as social or environmental.

Please provide an estimate of the saving if the Problem is solved (RIIO-1 projects only)

n/a

Please provide a calculation of the expected benefits the Solution

n/a

Please provide an estimate of how replicable the Method is across GB

n/a

Please provide an outline of the costs of rolling out the Method across GB.

n/a

Requirement 3 / 1

Involve Research, Development or Demonstration

A RIIO-1 NIA Project must have the potential to have a Direct Impact on a Network Licensee's network or the operations of the System Operator and involve the Research, Development, or Demonstration of at least one of the following (please tick which applies):

- A specific piece of new (i.e. unproven in GB, or where a method has been trialled outside GB the Network Licensee must justify repeating it as part of a project) equipment (including control and communications system software).
- A specific novel arrangement or application of existing licensee equipment (including control and/or communications systems and/or software)
- A specific novel operational practice directly related to the operation of the Network Licensees system
- A specific novel commercial arrangement

RIIO-2 Projects

- A specific piece of new equipment (including monitoring, control and communications systems and software)
- A specific piece of new technology (including analysis and modelling systems or software), in relation to which the Method is

unproven

- A new methodology (including the identification of specific new procedures or techniques used to identify, select, process, and analyse information)
- A specific novel arrangement or application of existing gas transportation, electricity transmission or electricity distribution equipment, technology or methodology
- A specific novel operational practice directly related to the operation of the GB Gas Transportation System, electricity transmission or electricity distribution
- A specific novel commercial arrangement

Specific Requirements 4 / 2a

Please explain how the learning that will be generated could be used by the relevant Network Licensees

n/a

Or, please describe what specific challenge identified in the Network Licensee's innovation strategy that is being addressed by the project (RIIO-1 only)

n/a

- Has the Potential to Develop Learning That Can be Applied by all Relevant Network Licensees

Is the default IPR position being applied?

- Yes

Please demonstrate how the learning from the project can be successfully disseminated to Network Licensees and other interested parties.

Please describe how many potential constraints or costs caused, or resulting from the imposed IPR arrangements.<

Please justify why the proposed IPR arrangements provide value for money for customers.

Project Eligibility Assessment Part 2

Not lead to unnecessary duplication

A Project must not lead to unnecessary duplication of any other Project, including but not limited to IFI, LCNF, NIA, NIC or SIF projects already registered, being carried out or completed.

Please demonstrate below that no unnecessary duplication will occur as a result of the Project.

n/a

If applicable, justify why you are undertaking a Project similar to those being carried out by any other Network Licensees.

n/a

Additional Governance And Document Upload

Please identify why the project is innovative and has not been tried before

n/a

Relevant Foreground IPR

n/a

Data Access Details

n/a

Please identify why the Network Licensees will not fund the project as apart of it's business and usual activities

n/a

Please identify why the project can only be undertaken with the support of the NIA, including reference to the specific risks(e.g. commercial, technical, operational or regulatory) associated with the project

n/a

This project has been approved by a senior member of staff

Yes
