

Notes on Completion: Please refer to the appropriate NIA Governance Document to assist in the completion of this form. The full completed submission should not exceed 6 pages in total.

## NIA Project Registration and PEA Document

### Date of Submission

Feb 2013

### Project Reference Number

## Project Registration

### Project Title

Climate Change and Seasonal Variation Impacts on Electrical Earthing Installations

### Project Reference Number

### Project Licensee(s)

National Grid Electricity Distribution

### Project Start

January 2005

### Project Duration

9 years and 3 months

### Nominated Project Contact(s)

WPD Future Networks Team (01332 827446)

### Project Budget

£525,000.00

## Summary

This project is developing a Geographical Information System (GIS) to assist in the prioritising of future maintenance of rural ground earthing systems, by providing a graphical presentation of ground conditions and the probability of the resistance of legacy shallow trench earthing changing significantly under future project climate change scenarios.

The project will also produce seasonal variation correction factors for both deep drive and shallow trench installations to allow the existing and new GIS tools to respond to seasonal variations

## Problem Being Solved

### Method(s)

### Scope

### Objective(s)

The Phase 1 Electrical Earthing project: An Information System to assist the installation of rural ground earthing systems was concerned with predicting the earthing requirements at sites within the network distribution areas of Western Power Distribution (Midlands) and UKPN. The project assumed that the installation of vertically inserted deep drive rods was the normal method of providing earthing systems and that a horizontal trenched system would only be considered when the ground conditions prevented this normal method.

The Phase 2 Electrical Earthing project: 'Climate change and seasonal variation impacts on electrical earthing installations' aims to investigate the temporal changes in earthing resistance. It is recognised that the earthing resistance of a system will change with time as the resistivity of the ground varies exponentially in response to changes in water content and temperature. In particular the value of legacy shallow trench earthing systems will be particularly affected. A number of climate change scenarios are available from climate modelling and these indicate that parts of the UK could experience dryer or wetter conditions and that the seasonal ranges of precipitation and temperature could be more extreme than today.

This project will provide qualitative and quantitative assessments of both seasonal changes and the impact of climate change on electrical earthing installations. The results of this study will provide a tool to identify those areas where earthing installations are most likely to go out of specification in future years.

### **Consumer Vulnerability Impact Assessment (RIIO-2 Projects Only)**

## Project Eligibility Assessment Part 1

There are slightly differing requirements for RIIO-1 and RIIO-2 NIA projects. This is noted in each case, with the requirement numbers listed for both where they differ (shown as RIIO-2 / RIIO-1).

### Requirement 1

Facilitate the energy system transition and/or benefit consumers in vulnerable situations (Please complete sections 3.1.1 and 3.1.2 for RIIO-2 projects only)

Please answer **at least one** of the following:

#### How the Project has the potential to facilitate the energy system transition:

n/a

#### How the Project has potential to benefit consumer in vulnerable situations:

n/a

### Requirement 2 / 2b

Has the potential to deliver net benefits to consumers

Project must have the potential to deliver a Solution that delivers a net benefit to consumers of the Gas Transporter and/or Electricity Transmission or Electricity Distribution licensee, as the context requires. This could include delivering a Solution at a lower cost than the most efficient Method currently in use on the GB Gas Transportation System, the Gas Transporter's and/or Electricity Transmission or Electricity Distribution licensee's network, or wider benefits, such as social or environmental.

#### Please provide an estimate of the saving if the Problem is solved (RIIO-1 projects only)

n/a

#### Please provide a calculation of the expected benefits the Solution

n/a

#### Please provide an estimate of how replicable the Method is across GB

n/a

#### Please provide an outline of the costs of rolling out the Method across GB.

n/a

### Requirement 3 / 1

Involve Research, Development or Demonstration

A RIIO-1 NIA Project must have the potential to have a Direct Impact on a Network Licensee's network or the operations of the System Operator and involve the Research, Development, or Demonstration of at least one of the following (please tick which applies):

- A specific piece of new (i.e. unproven in GB, or where a method has been trialled outside GB the Network Licensee must justify repeating it as part of a project) equipment (including control and communications system software).
- A specific novel arrangement or application of existing licensee equipment (including control and/or communications systems and/or software)
- A specific novel operational practice directly related to the operation of the Network Licensees system
- A specific novel commercial arrangement

RIIO-2 Projects

- A specific piece of new equipment (including monitoring, control and communications systems and software)
- A specific piece of new technology (including analysis and modelling systems or software), in relation to which the Method is

unproven

- A new methodology (including the identification of specific new procedures or techniques used to identify, select, process, and analyse information)
- A specific novel arrangement or application of existing gas transportation, electricity transmission or electricity distribution equipment, technology or methodology
- A specific novel operational practice directly related to the operation of the GB Gas Transportation System, electricity transmission or electricity distribution
- A specific novel commercial arrangement

## Specific Requirements 4 / 2a

**Please explain how the learning that will be generated could be used by the relevant Network Licensees**

n/a

**Or, please describe what specific challenge identified in the Network Licensee's innovation strategy that is being addressed by the project (RIIO-1 only)**

n/a

- Has the Potential to Develop Learning That Can be Applied by all Relevant Network Licensees

**Is the default IPR position being applied?**

- Yes

**Please demonstrate how the learning from the project can be successfully disseminated to Network Licensees and other interested parties.**

**Please describe how many potential constraints or costs caused, or resulting from the imposed IPR arrangements.<**

**Please justify why the proposed IPR arrangements provide value for money for customers.**

## Project Eligibility Assessment Part 2

**Not lead to unnecessary duplication**

A Project must not lead to unnecessary duplication of any other Project, including but not limited to IFI, LCNF, NIA, NIC or SIF projects already registered, being carried out or completed.

**Please demonstrate below that no unnecessary duplication will occur as a result of the Project.**

n/a

**If applicable, justify why you are undertaking a Project similar to those being carried out by any other Network Licensees.**

n/a

## Additional Governance And Document Upload

**Please identify why the project is innovative and has not been tried before**

n/a

**Relevant Foreground IPR**

n/a

**Data Access Details**

n/a

**Please identify why the Network Licensees will not fund the project as apart of it's business and usual activities**

n/a

**Please identify why the project can only be undertaken with the support of the NIA, including reference to the specific risks(e.g. commercial, technical, operational or regulatory) associated with the project**

n/a

**This project has been approved by a senior member of staff**

Yes
