

NIA Project Registration and PEA Document

Date of Submission

Jan 2015

Project Reference

SSET1011

Project Registration

Project Title

Digital Substation Platform - Phase 1

Project Reference

SSET1011

Project Licensee(s)

Scottish & Southern Electricity Networks

Project Start

January 2015

Project Duration

0 years and 3 months

Nominated Project Contact(s)

SSEN Future Networks Team

Project Budget

£360,000.00

Summary

Previously SHEPD has worked with Smarter Grid Solutions (SGS) and Locamation separately on a number of different projects. These include the development and deployment of the UK's first Active Network Management (ANM) system by SGS, which deferred the reinforcement of the Orkney Distribution Network by the use of ANM; consisting of a real time monitoring and control system to better utilise the existing network capacity. SHEPD have also worked with Locamation on an IFI project to determine if a server based protection system would provide any benefits over the traditional relay based systems.

This project is aimed principally at determining the feasibility of combining the ANM and protection systems together to simplify the IT architecture and minimise costs by rationalising both hardware and software whilst retaining the benefits and performance of both systems.

SHEPD will establish a collaboration agreement with both parties and use a phased approach for project delivery. This will allow the project to be ended early if the anticipated benefits don't materialise.

Phases 2 and 3 will be separate follow on projects and are also expected to be registered as NIA projects.

Problem Being Solved

Method(s)

Scope

Objective(s)

The scope of this project is to deploy a trial system with protection and ANM functionality together on the same hardware platform in a test environment i.e. the PNDC. Objectives:

1. Demonstration of data integration and interfacing between the two platforms;
2. Simulated control of a generator to allow the management of voltage on the network;
3. Protection of primary assets using Locamation's suite of protection algorithms;
4. Definition of a methodology for deeper integration in Phase 2

Consumer Vulnerability Impact Assessment (RIIO-2 Projects Only)

Project Eligibility Assessment Part 1

There are slightly differing requirements for RIIO-1 and RIIO-2 NIA projects. This is noted in each case, with the requirement numbers listed for both where they differ (shown as RIIO-2 / RIIO-1).

Requirement 1

Facilitate the energy system transition and/or benefit consumers in vulnerable situations (Please complete sections 3.1.1 and 3.1.2 for RIIO-2 projects only)

Please answer **at least one** of the following:

How the Project has the potential to facilitate the energy system transition:

n/a

How the Project has potential to benefit consumer in vulnerable situations:

n/a

Requirement 2 / 2b

Has the potential to deliver net benefits to consumers

Project must have the potential to deliver a Solution that delivers a net benefit to consumers of the Gas Transporter and/or Electricity Transmission or Electricity Distribution licensee, as the context requires. This could include delivering a Solution at a lower cost than the most efficient Method currently in use on the GB Gas Transportation System, the Gas Transporter's and/or Electricity Transmission or Electricity Distribution licensee's network, or wider benefits, such as social or environmental.

Please provide an estimate of the saving if the Problem is solved (RIIO-1 projects only)

n/a

Please provide a calculation of the expected benefits the Solution

n/a

Please provide an estimate of how replicable the Method is across GB

n/a

Please provide an outline of the costs of rolling out the Method across GB.

n/a

Requirement 3 / 1

Involve Research, Development or Demonstration

A RIIO-1 NIA Project must have the potential to have a Direct Impact on a Network Licensee's network or the operations of the System Operator and involve the Research, Development, or Demonstration of at least one of the following (please tick which applies):

- A specific piece of new (i.e. unproven in GB, or where a method has been trialled outside GB the Network Licensee must justify repeating it as part of a project) equipment (including control and communications system software).
- A specific novel arrangement or application of existing licensee equipment (including control and/or communications systems and/or software)
- A specific novel operational practice directly related to the operation of the Network Licensees system
- A specific novel commercial arrangement

RIIO-2 Projects

- A specific piece of new equipment (including monitoring, control and communications systems and software)
- A specific piece of new technology (including analysis and modelling systems or software), in relation to which the Method is

unproven

- A new methodology (including the identification of specific new procedures or techniques used to identify, select, process, and analyse information)
- A specific novel arrangement or application of existing gas transportation, electricity transmission or electricity distribution equipment, technology or methodology
- A specific novel operational practice directly related to the operation of the GB Gas Transportation System, electricity transmission or electricity distribution
- A specific novel commercial arrangement

Specific Requirements 4 / 2a

Please explain how the learning that will be generated could be used by the relevant Network Licensees

n/a

Or, please describe what specific challenge identified in the Network Licensee's innovation strategy that is being addressed by the project (RIIO-1 only)

n/a

- Has the Potential to Develop Learning That Can be Applied by all Relevant Network Licensees

Is the default IPR position being applied?

- Yes

Please demonstrate how the learning from the project can be successfully disseminated to Network Licensees and other interested parties.

Please describe how many potential constraints or costs caused, or resulting from the imposed IPR arrangements.<

Please justify why the proposed IPR arrangements provide value for money for customers.

Project Eligibility Assessment Part 2

Not lead to unnecessary duplication

A Project must not lead to unnecessary duplication of any other Project, including but not limited to IFI, LCNF, NIA, NIC or SIF projects already registered, being carried out or completed.

Please demonstrate below that no unnecessary duplication will occur as a result of the Project.

n/a

If applicable, justify why you are undertaking a Project similar to those being carried out by any other Network Licensees.

n/a

Additional Governance And Document Upload

Please identify why the project is innovative and has not been tried before

n/a

Relevant Foreground IPR

n/a

Data Access Details

n/a

Please identify why the Network Licensees will not fund the project as apart of it's business and usual activities

n/a

Please identify why the project can only be undertaken with the support of the NIA, including reference to the specific risks(e.g. commercial, technical, operational or regulatory) associated with the project

n/a

This project has been approved by a senior member of staff

Yes
